What would life be like without surprises?

The Triton side flex prosthetic foot

Quality for life

“I have this new foot, the Triton side flex, and I never imagined that having a new prosthetic foot would make such a big difference.”

Marije

Be flexible with the unique degree of side-to-side flexibility of the Triton side flex!

With the Triton side flex, we have developed a prosthetic foot that provides extraordinary side-to-side flexibility. The functional module reduces the sideward tilting moments on the knee or in the socket. Even when you set the prosthetic foot down at an angle or on uneven or sloping ground, the Triton side flex ensures safe, full-ground contact with immediate controlled adjustment. Simultaneously, compensatory movements can be minimised.

You will be surprised at how much you benefit from the added comfort and safety in many activities at work, in your free time, and at home. Now you can finally concentrate on what's important to you and the people around you – because you decide where to go.

Effortless
adaptation to
sideward
slopes

Movement
in confined
spaces

Walking on
uneven ground
and obstacles

Safe and
comfortable
standing with
legs apart

Afraid of water?
Not with the
Triton side flex
